

Random Forest Classification

1. What is the overall performance of the Random Forest model? **91**
2. What is the correct classification of purchase ? **43**
3. What is the value of actual non-purchase ? **93%**
4. How many purchase cases are incorrectly classified as non-purchase? **6**
5. Which class has better prediction performance?
Non-purchased
6. How many total test samples are there? **134**
7. What is the F1-score for purchase? **88%**
8. What is the macro-average F1-score? **90%**
9. What is the weighted-average F1-score? **91%**
10. How many total purchase cases are there? **49**

Decision Tree Classification

1. What is the overall performance of the Decision Tree model?
87
2. What is the correct classification of purchase ? **41**
3. What is the value of actual non-purchase ? **89%**
4. How many purchase cases are incorrectly classified as non-purchase? **8**
5. Which class has better prediction performance?
Non-purchased
6. How many total test samples are there? **134**
7. What is the F1-score for purchase? **83%**
8. What is the macro-average F1-score? **86%**
9. What is the weighted-average F1-score? **87%**
10. How many total purchase cases are there? **49**

SVM Classification

1. What is the overall performance of the SVM ? **87**
2. What is the correct classification of purchase ? **23**
3. What is the value of actual non-purchase ? **78%**
4. How many purchase cases are incorrectly classified as non-purchase? **26**
5. Which class has better prediction performance?
Non-purchased
6. How many total test samples are there? **134**
7. What is the F1-score for purchase? **73%**
8. What is the macro-average F1-score? **73%**
9. What is the weighted-average F1-score? **76%**
10. How many total purchase cases are there? **26**
